Tractor accidents on farms cause the highest number of fatalities. Tractor turnovers accounting for 44 % of all tractor fatalities. Roll-Over Protective Structures (ROPS) provide a safer environment for the tractor operator in the event of a rollover. Per CCR T8 §3651, where a recognized hazard exists, operator protection from falling or rolling objects shall be provided by either ROPS or other independent means compatible with the use of ROPS.

ROPS must also bear a label, the labeling must include the following information:

- (1) Manufacturer's or fabricator's name and address;
- (2) ROPS model number, if any;
- (3) Tractor makes, models, or series numbers that the structure is designed to fit;
- (4) A statement of compliance with the appropriate ASAE Standard or SAE Recommended Practice;

Labels shall be stamped plates or other permanently attached means of identification, and shall not be obscured, obliterated, or changed. CCR T8 §3651(d)(1-4)

In addition to proper labeling, remember operators must always wear their seatbelt when operating equipment where rollover protection is installed.

If you have questions or would like to schedule a Program Audit and Safety Inspection with California Safety Training Corporation®, Contact us at 661.377.8300!
